# My sorting factory

22 October 2026 · Pair names _____

Use this page to record ideas. The notebook explains each step. One partner predicts, one types; swap roles after each activity. Open your team copy and run with Shift+Enter. Save with Ctrl+S or Command+S.

### A First program 25 minutes

Before running, I predict the last object number and destination:

_____

One value we changed _____ Output _____

### B Camera decisions 35 minutes

For the original five reports, predict: left ____ right ____ reject ____

After running: left ____ right ____ reject ____

An actual red object reported as blue goes _____

A report I would reject and why _____

### C Three station rotations 45 minutes

Spend 15 minutes each at robot, conveyor and camera.

A sensor measures _____ An actuator changes _____

Why stop before picking _____

### D Our complete factory 45 minutes

Our changed rule _____

Prediction: left ____ right ____ reject ____ total ____

Observed: left ____ right ____ reject ____ total ____

Did the action order also match _____

### E Our experiments 40 minutes

Challenge and prediction _____

Observed result _____

A second challenge and what it taught us _____

_____

### Closing 15 minutes

One difference between the simulation and a real factory:

_____

Notebook route A → B → break → C rotations → D → E → closing. Introduction 25 minutes; break 10 minutes. Total 4 hours. Save your work and keep the original notebook as a clean copy.
